

## D Edit \*name\* file

Select **Add new name** if you want to add one or more names to the file. The program goes to Screen E, **Enter name to be added**.

Select a **previously entered name** if you want to delete that name from the list. As you scroll through the list of names, each name is highlighted, and the word Delete appears next to it. When the name you want to delete is highlighted, press [return].

You cannot edit a previously entered name. Thus, in order to change *Mray Msith* to *Mary Smith*, you must first delete the incorrect name, then select Add new name and enter the correct name.

Select **Save edited file** when you are done editing the file. The program goes to Screen C, **Save \*name\* file**.

## **E** Enter name to be added

Enter each name you want to add to the file. Remember, each name can be up to 25 characters long, and there is a maximum of 75 names per file.

To make corrections, press [backarrow] or [delete] before pressing [return]. Once you have entered a name, you can correct it only from Screen D, **Edit \*name\* file.**

When you are done entering names, press [return] when the entry line is blank. The program goes to Screen D, **Edit \*name\* file.** From there, you can save the file.

On Screen D, the names you added will appear at the end of the list. Then, when you save the file, the names will be arranged in alphabetical order.
